**StaLok<sup>®</sup>W/A**  
PAVER SAND

StaLok<sup>®</sup>W/A Paver Sand is a pre-mixed, water activated sand and binder that stands up to the elements. It holds your pavers firmly in place, while resisting erosion and intrusion from weeds and insects. StaLok<sup>®</sup>W/A Paver Sand can also be used to provide a more stable below-paver base.

Materials and installation cost can be approximately 40% less than a concrete surface and up to 70% less than a variety of paver surfaces.

Stabilizer is the original non-toxic, non-staining organic soil stabilizer first introduced by Stabilizer Solutions, Inc. over 20 years ago. It has long been the international standard for stabilized crushed stone paving. Stabilizer binds and locks crushed stone screenings to provide a durable, natural aggregate surface. This surface substantially resists the erosive effects of weather and traffic.

This is our most cost-effective paving solution and is available pre-mixed with any of our over 25 colors of crushed aggregate. Water-activation of this product is accomplished by thoroughly soaking the material in place and then compacting. Once dry, this surface will reabsorb a limited amount of water and remain porous, yet will retain its' firmness, even in very wet conditions.

LEED: Stormwater Management (2 points), Reduced Heat Island Effect (2 points), Local/Regional Materials (1 point)  
ADA Compatible POROSITY: Yes

process

waterless  
process

StaNok® Paving Materials are a long lasting crushed stone paving mix. Our StaNok® Pathway Mix™ combines natural crushed stone with a combination of engineered polymers in a totally waterless process. It provides this versatile, dustless, natural looking surface for pathways, patios, driveways and plazas. This unique process allows for greater creativity in design applications, and provides solutions for demanding traffic projects.

StaNok® Pathway Mix™ is pre-mixed for easy installation and maintenance. No water is needed for this product, it sets-up with compaction. It can be re-worked after removal as needed for subsurface access to utilities or site plan modifications. StaNok® Pathway Mix™ is completely dustless and does not get muddy.

LEED™ Potential- Positive Impact  
Stabilizer Solutions, Inc.'s family of products has the potential to improve your LEED™ accreditation. The LEED Green Building Rating System program of the US Green Building Council evaluates environmental performance from a "whole building" perspective. These "green building" standards are based on accepted energy and environmental principles. The LEED system rates new and existing commercial, institutional, and high-rise residential buildings. Credits are earned for each aspect of a particular project by satisfying the criteria set forth by the council. Based upon the number of credits earned, various levels of certification are awarded. More information is available at [www.usgbc.org](http://www.usgbc.org).

The Americans with Disabilities Act (ADA) ensures accessibility for America's 43 million people with disabilities at public and commercial venues. Our paving surfaces provide the firmness needed for total accessibility AND are compatible with the goals of The American with Disabilities Act. More information is available at [www.usdoj.gov](http://www.usdoj.gov)
